

In short, my project is actually of an industrial nature, so I don't see a big and beautiful layout for it, my service will help teachers and university staff read data about all entities and their connections with convenient functionality, I made registration and login pages for teachers, as well as quick tabs to get specific data instantly. To gain access to my service, as well as to student data, you will need to contact someone at the top of the university administration. A page has also been created where all the necessary information to contact me will be. I didn't come up with my own logo, and therefore I thought that the university logo would be especially suitable for internal services.
